

ENERGY AND CALM: BRAIN BREAKS AND FOCUSED-ATTENTION PRACTICES

JANUARY 14, 2015

When presented with new material, standards, and complicated topics, we need to be focused and calm as we approach our assignments. We can use brain breaks and focused-attention practices to positively impact our emotional states and learning. They refocus our neural circuitry with either stimulating or quieting practices that generate increased activity in the prefrontal cortex, where problem solving and emotional regulation occur.

Brain Breaks

A brain break is a short period of time when we change up the dull routine of incoming information that arrives via predictable, tedious, well-worn roadways. Our brains are wired for novelty because we pay attention to any and every stimulus in our environment that feels threatening or out of the ordinary. This has always been a wonderful advantage because our survival as a species depended on this aspect of brain development. When we take a brain break, it refreshes our thinking and helps us discover another solution to a problem or see a situation through a different lens. Consider trying these with your class:

1. The Junk Bag

I always carry a bag of household objects containing markers, scrap paper, and anything that one would find in a junk drawer -- for example, a can opener or a pair of shoelaces. Pick any object out of the junk bag and ask students to come up with two ways this object could be reinvented for other uses. They can write or draw their responses. Once students have drawn or written about an invention, they can walk the room for one minute sharing and comparing.

2. Squiggle Story

On a blank sheet of paper, whiteboard, or Promethean Board, draw one squiggly line. Give students one minute to stand and draw with their opposite hand, turning the line into a picture or design of their choice.

3. Opposite Sides

Movement is critical to learning. Have students stand and blink with the right eye while snapping the fingers of their left hand. Repeat this with the left eye and right hand. Students could also face one another and tap the right foot once, left foot twice, and right foot three times, building speed they alternate toe tapping with their partner.

4. Symbolic Alphabet

Sing the alphabet with names of objects rather than the letters.

5. Other Languages

Teach sign language or make up a spoken language. In pairs, students take turns speaking or interpreting this new language for 30 seconds each.

6. Mental Math

Give a set of three instructions, counting the sequence to a partner for 30 seconds. Example: Count by two until 20, then count by three until 50, finishing with seven until 80. Switch and give the other partner another set of numbers to count.

7. Invisible Pictures

Have a student draw a picture in the air while their partner guesses what it is. You could give them categories such as foods, places, or other ways to narrow the guessing.

8. Story Starters

A student or teacher begins a story for one minute, either individually or with a partner. The students then complete or continue it with a silly ending.

9. Rock Scissors Paper Math

With the traditional game, the last call-out is "math." With that call, students lay out one, two, three, or four fingers in the palm of their hand. The best of three wins.

Focused-Attention Practices

A focused-attention practice is a brain exercise for quieting the thousands of thoughts that distract and frustrate us each day. When the mind is quiet and focused, we are able to be present with a specific sound, sight, or taste. Research repeatedly shows that quieting our minds ignites our parasympathetic nervous system, reducing heart rate and blood pressure while enhancing our coping strategies to effectively handle the day-to-day challenges that keep coming. Our thinking improves and our emotions begin to regulate so that we can approach an experience with variable options.

For the following practices, the goal is to start with 60 to 90 seconds and build to five minutes:

1. Breathing

Use the breath as a focus point. Have students place one hand close to their nose (not touching) and one hand on their belly. As they breathe in, have them feel their bellies expand. As they exhale, they can feel the warm air hit their hand. Students will focus on this breath for only one minute. Let them know that it's OK when thoughts sometimes come into the mind uninvited. Tell them to exhale that thought away.

2. Colors

Visualize colors while focusing on the breath. Inhale a deep green, and exhale a smoky gray. Have the students imagine the colors as swirling and alive with each inhale. If a student is de-escalating from an angry moment, the color red is a great color to exhale.

3. Movement

For younger children, direct students to stand and, as they inhale, lift an arm or leg and wiggle it, exhaling it back to its original position. For younger grades beginning these focused-attention practices, it's good to include an inhale and exhale with any type of movement.

4. The Deep-Dive Breath

We inhale for four counts, hold for four, and exhale slowly for four counts. You can increase the holding of breath by a few seconds once the students find the rhythm of the exercise.

5. Energizing Breath

We pant like a dog with our mouths open and our tongues out for 30 seconds, continuing for another 30 seconds with our mouths closed as we take short belly breaths with one hand on the belly. We typically take three energizing pant breaths per second. After a full minute, the students return to four regular deep inhales and exhales.

6. Sound

The use of sound is very powerful for engaging a calm response. In the three classrooms where I teach, we use rain sticks, bells, chimes, and music. There are many websites that provide music for focus, relaxation and visualization. Here is [one of my favorites](#).

7. Rise and Fall

As we breathe in and out through our noses, we can lie on the floor and place an object on our stomachs, enhancing our focus by watching the rising and falling of our bellies.

When we are focused and paying attention to our thoughts, feelings and choices, we have a much greater opportunity to change those thoughts and feelings that are not serving us well in life and in school. When we grasp this awareness, we see and feel the difference!

How do you stimulate or quiet your students?
